OOPS Interview QUESTIONS

PART-1

- 1. What is meant by teum OOPS?
 - OOPs refers to the object-oriented Programming. It is
 the programming paradigm that is defined using objects.
 Objects can be considered as real-world instances of
 entities like class, that have some characteristics and
 behaviours.

- 2. What is the need for DOPs ?
- => There are many reasons why oops is mostly preferred,
 but the most important among them are:-
 - * OOPs helps useus to understand the software easily, although they don't know the actual implementation.
 - # With DDPs, the seadability, understandability, and maintainability of the code increase multifold.
 - * Even very big software can be easily written and managed easily using OOPs.

- Date:_____
- 3. What are some Major Object Oriented Trogramming languages?
- The programing languages that use and follow the Object Orient Programming passadigm or OOPs, are known as Object Oriented Programming languages.

 Some of the major Object Oriented Programming languages.

 Languages are:-
 - * Java
 - * C++
 - * Java Script
 - * Python
 - * PHP

and many more.

- 4. What is meant by structured Programming?
- => Structured Programming seles to the method of programming which consists of a completely structured control flow. Here structure seles to a block, which contains a set of sure, and has a definitive control flow, such as (if I then leve), (While and for), block structures, and subsoutines.
 - * Newly all programming paradigm include
 Structured Programming
 - * Including the OOPs model.

- 5. What are the main features of DOPS ?
- 1) OOPs or Object Oriented Programming mainly comprises of the below four features, and make sure you don't miss only of these:
 - * inhevitance
 - * Encopsulation
 - * Polymorphism
 - * Data Abstraction

@ codeus_motes

- 6. What are some advantages of using ODPs 9
- => * OOPs is very helpful in solving very complex level Of problems.
 - # Highly complex programs can be created, handled and maintained easily using object-oriented programming.
 - * ODPs promote code sieuse, thereby reducing redund-
 - * OOPs also helps to hide the unnecessary details with the help of Data Abstraction.
 - # ODPs are based on a bottom-up approach, unlike
 the structural programming paradigm, which uses
 a top-down approach.
 - * Polymorphism offers a lot of flexibility in DOPs.

- 7. Why is OOPs so Popular ?
- better style of programming. Not only it helps in writing a complex piece of code early, but it also allows used to handle and maintain them early as well.

The main Pillan of ODPs - Data Abstraction, Encapsulation, Inheritance and Polymorphism, makes it easy for programmers to solve complex seemanics.

As a mesunt of these, ODPs is so popular.

Krishna Agrawal (Linked In)

8. What is a class?

=> A class can be undenstood as a template or blueprint,
which contains some values, known as member data or member, and some set of soles,
known as behaviours defined in the class
template. In

In the heal world, an object is an heal/actual entity to which a user interacti, whereas class is just the bluepoint for that object.

So, the objects consume space and have some characteristics behaviour.

For example: - A specific can.
